

HEADING

Reliable snow conditions in Obertauern

SUBHEADING

Where snow feels at home

SHORT TEXT

Abundant natural snow, a high-altitude location and a long winter season: Obertauern is Austria's snowiest winter sports destination. A scientific study confirms this: with an average maximum snow depth of 264 centimetres, Obertauern ranks highest among the Austrian winter sports destinations studied.

TEXT

Snow feels at home in Obertauern. At 1,740 metres above sea level, its distinctive location in the Radstädter Tauern brings regular fresh natural snow. Weather systems from both the north and the south deliver abundant snow to these mountains, creating excellent skiing conditions from November to early May.

Long-term measurements also show that Obertauern is Austria's snowiest winter sports destination. Ski tourism researcher Günther Aigner compared snow depths at selected winter sports destinations across seven Austrian federal states. With an average maximum snow depth of 264 centimetres, Obertauern leads the ranking by a clear margin. No statistically significant decline in snow depths was observed over the long-term period studied.

HARD FACTS

- Village altitude: 1,740 metres
- Obertauern is Austria's snowiest winter sports destination
- Regular natural snowfall brought by weather systems from the north and south
- Study by ski tourism researcher Günther Aigner based on long-term snow measurements
- Average maximum snow depth: **264 cm, the highest among the destinations compared**
- No statistically significant decline in snow depths over the long-term period examined
